Helping to Reduce Costs, and Improve Efficiencies

At GE Energy, we know that you face increasing pressure to reduce costs and improve efficiencies -- and we continue to offer innovative solutions to help you meet those needs. Migrating from conventional valve positioners to digital valve positioners, such as Masoneilan Smart Valve Interface (SVI*) technology from GE, is one step in the right direction. But as your upgrade and re-instrumentation needs continue to grow, it's vital that you have access to a reliable supply of retrofit mounting kits compatible with a wide range of control valve types.

GE's Smart Product Mounting Kit Program is designed to help meet the growing demand for HART® and Foundation™ Fieldbus positioners. This program offers a variety of kits that adapt an SVI positioner to a range of control valve makes and styles, allowing you to migrate to SVI or FVP* protocols on our Masoneilan valves or any other manufacturers control valves.

Providing Quality, Durability and Simplicity

GE Energy's Masoneilan products have been known for high quality for decades. Our mounting kits uphold these high standards through exceptional design that results in dependable, reliable long-term service. Expertly crafted for compatibility with most valve types, the kits help you seamlessly upgrade from conventional valve positioners to digital positioners. The standard mounting brackets are built to last using stainless steel grade (304) material. For applications in tough offshore environments, mounting brackets are available in corrosive-resistant 316 stainless steel. In the end the mounting kits are robust and strong to provide vibration resistance which is critical to dependable digital product control. See the difference when inspecting a high quality Masoneilan Kit vs another. The difference is clear to the eye.

Additionally, Smart Product mounting kits are simple to provision and install. Our web based tools make finding the right mounting kit easy and once you get the kit the "easy to read exploded view drawings" allow for simple mounting.

Specializing in Fast Delivery

To help you efficiently migrate to digital technology, our program focuses on quick delivery. On-the-shelf inventory is available in our Aftermarket Centers around the world, including competitive interface kits for the most popular brands.

*Call as needed. Project orders of more than 15 mounting kits require advanced planning and additional lead-time. Some low-demand kits may be special order items. If what you need is not available, please contact your regional sales manager. We remain committed to providing the kit you need to upgrade your valve to digital technology.
